# GINA CENTRAL

MONITORING AND SAFETY MANAGEMENT PLATFORM

"UNITE PLATFORM COMBINING VEHICLE AND STAFF TRACKING AND INSTANT ACCESS TO MISSION CRITICAL DATASETS."

GINA Central is designed to provide international organizations with a modern command & control tool. GINA is a monitoring and safety management platform based on a collaborative and interactive map shared in real time among all users of the system. It combines vehicle and personnel tracking with instant access to different types of datasets.

SAVE LIVES THROUGH TECHNOLOGY

GINA CENTRAL

MONITORING AND SAFETY MANAGEMENT PLATFORM

TRACKING

Track the position of vehicles and staff in real time with detailed access to history. Units can be tracked by selection of tracking devices such as GSM and satellite trackers, smart applications and radios.

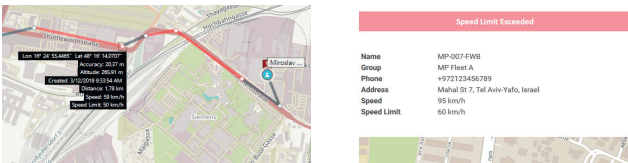

GEO-FENCING

Define safe and dangerous zones, send emergency essages, use border crossing detection and set evacuation routes.

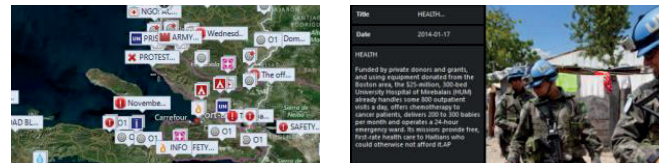

FLEET MANAGEMENT

Configure speed limits for your drivers, send automatic notifications while speeding, read telematics of the vehicles such as fuel usage and get user defined reports.

SECURITY INCIDENTS

Create security incidents from the system or import them from already existing databases. Collect field data in configurable format, share it with others and create structured data reports.

DATA ANALYSIS

Integrate your own security or project data into the platform, visualize it directly in the map together with your units' positions to increase the safety and security of your staff.

SOPs

Create and use customized SOPs which help your staff to carry out complex, routine operations.
